

ACBCC English Ministry — User Guide

This guide explains the three login roles available in the ministry portal, what each role can do, and how passwords are managed.

Login Roles Overview

There are three login roles, each serving a different area of ministry administration:

Role	Purpose
Class	Class leaders managing attendance and class resources
Coworker	Ministry coworkers viewing the monthly duty schedule
Admin	Full system administration

Each role has its own password. On the login screen, select your role from the dropdown and enter the corresponding password.

Sessions automatically expire after 40 minutes of inactivity. You will be redirected to the login page and must log in again.

Class Role

Intended for **class leaders and teachers** who manage a Bible study or education group.

What the Class Role Can Do

- **View and manage classes** — access only active classes assigned to you
- **Track attendance** — check in members for each class session and record who attended
- **Manage class sessions** — create sessions, record topics, and add session notes
- **Maintain a class roster** — add members and track their attendance history
- **Search attendance history** — look up a person across all classes
- **Upload class resources** — attach documents to a class or specific session. These documents are viewable by all via Ministries -> Resources on Menu Bar.
- **Receive email notifications** — if an unrecognized person checks in, the class leader is notified by email

Class Leader Password

Each class can have its own **lead password** set by an Admin. This is not the same as the role-level password.

Coworker Role

Intended for **ministry coworkers** who can view the full calendar. Also able to add New Event to calendar.

What the Coworker Role Can Do

- **View the duty schedule** — see the monthly, weekly, and daily schedule calendar
- **Search the schedule** — look up specific dates or events across any time period
- **View church document repository** — these documents are uploaded by the Admin (announcements, resources, references, etc.)

What the Coworker Role Cannot Do

- Coworkers cannot edit, add, or delete schedule event entries — available to Admin-only
 - Coworkers cannot upload documents to the repository, view-only access.
-

Admin Role

The Admin role has full access to all areas of the portal.

What the Admin Role Can Do

Everything the Coworker role can do, plus:

Schedule Management

- **Add and edit events** — create new duty assignments, edit existing entries, or delete events from the calendar
- **event types** — remove event type
- **Manage teams** — remove team

Coworker Duty Reminder Emails

- **Send monthly reminders** — select any month and send personalized email reminders to every coworker who has duties scheduled that month
- Each email is addressed to the coworker by name and lists all their assigned duties with the date, event name, and task description
- The system will report back which emails were sent, which coworkers were skipped (not in the contacts database or no email on file), and any errors

Class Administration

- **Add new classes** — create classes with details such as name, leader, location, meeting schedule, and recurrence
- **Set the class lead password** — assign or update the lead password for an the class
- **Archive classes** — soft-archive a class when it is no longer active (does not delete history)

Church Document Repository

- **Upload documents** — add PDFs, Word, PowerPoint, Excel, images, video, and audio files (up to 100 MB) to the shared repository visible to all coworkers
- **Add external links** — attach YouTube links or external URLs as repository entries

- **Edit document metadata** — update the title, category, or owner name for any document
- **Delete documents** — remove documents from the repository

Congregation/Contacts Management

- **Add and edit contacts** — maintain the congregation member directory including photos
- **Delete contacts** — remove members from the directory

Password Management

- **Change role passwords** — update the login password for the Class, Coworker, or Admin role at any time

Password Management

Role Passwords

There are 3 roles passwords — Class, Coworker, and Admin. Same password per role.

- Only the **Admin** can change role passwords
- Role passwords should be changed periodically (e.g., every few months) to maintain security
- After a password is changed, share the new password with the relevant users directly — the system does not send automatic notifications when a role password changes

Class Lead Passwords

Each class can have its own 'lead' password, separate from the Class role password. This password is set by the Admin and given to the class leader.

- Only the **Admin** can set or reset a class lead password
- A class leader should notify the Admin if they need their lead password reset
- Class lead passwords can be updated at any time or periodically.

Security Recommendations

- Change role passwords periodically — at a minimum when a coworker or class leader leaves the ministry
- Do not share the Admin password with non-admin users
- The Admin password provides full access to all data and settings
